Lecture 20: Summary

Overview
Parallel concepts common to all architectures
Parallel concepts common to some architectures
Final Assessment

Previous lectures
Today's lecture

Previous lectures

This module has been structured to focus on one parallel
archi

①
②
③ General purpose GPU (with OpenCL); Lectures 14-19.

The practical elements of the module
worksheets and courseworks) also followed this structure.

- Some *mentions* were out-of-order, *e.g.* OpenMP barriers
  mentioned in Lectures 11 and 17.

Overview
Parallel concepts common to all architectures
Parallel concepts common to some architectures
Final Assessment

Previous lectures
Today's lecture

Today's lecture

Want to understand **general parallel programming concepts** that transcend particular architectures.

-
-

In this final lecture we will summarise all of the mater **parallel concept** rather than by architecture.

- Easier to see the commonalities.

At the end I'll also spend a few minutes talking about the **Final assessment** for the module!

Overview
Parallel concepts common to all architectures
Parallel concepts common to some architectures
Final Assessment

Weak and strong scaling, and models
Loop parallelismand data dependencies
Synchronisation
Load balancing and task parallelism
Data reorganisation

Why parallel?
Lectures 1 and 4

Assignment Project Exam Help

Parallel hardware allows **simultaneous** computations.

- https://eduassistpro.github.i

- could be *e.g.* time-sharing on a single c

Add WeChat edu_assist_pr

Want to attain good **scaling** - decrease i
time t_{p} for increasing number of **processing units** *(threads, processes etc.)* p.

Overview
Parallel concepts common to all architectures
Parallel concepts common to some architectures
Final Assessment

Weak and strong scaling, and models
Loop parallelismand data dependencies
Synchronisation
Load balancing and task parallelism
Data reorganisation

Measuring parallel performance
Lecture 4

Two useful metrics for parallel performance are the **speed-up** S and **efficiency** E

Achieving $S = p$ (*i.e.* $E = 1$) usually regar
difficult to achieve due to various **over**

- Synchronisation, load balancing, com
  calculations, . . .
- **Super-linear scaling** $S > p$ possible (but rare) due to memory cache.

Overview
Parallel concepts common to all architectures
Parallel concepts common to some architectures
Final Assessment

Weak and strong scaling, and models
Loop parallelismand data dependencies
Synchronisation
Load balancing and task parallelism
Data reorganisation

Laws for maximum parallel performance
Lectures 4, 19

Assignment Project Exam Help

Strong scaling is when the problem size n is fixed.

- $\dfrac{1}{\_\_}$

- https://eduassistpro.github.i

Weak scaling allows n to increase with

- Related to the **Gustafson-Barsis l**

Add WeChat edu_assist_pr

The **work-span model** provides anothe
maximum S from **task-graphs** *[Lecture 19]*.

- $S \leq (\mathrm{work})/(\mathrm{span})$, with **work** and **span** determined from the
  task graph.

Overview
Parallel concepts common to all architectures
Parallel concepts common to some architectures
Final Assessment

Weak and strong scaling, and models
Loop parallelismand data dependencies
Synchronisation
Load balancing and task parallelism
Data reorganisation

Loop parallelism and data dependencies
Lectures 3, 5, 9, 15

- Similarly looked at parallelising **loops**.
- If there are no **data dependencies**, is **data parallel** or a **map**.
-
-

Overview
Parallel concepts common to all architectures
Parallel concepts common to some architectures
Final Assessment

Weak and strong scaling, and models
Loop parallelismand data dependencies
Synchronisation
Load balancing and task parallelism
Data reorganisation

Synchronisation
Lectures 7, 9, 11, 17

Assignment Project Exam Help

All but the simplest parallel problems require **synchronisation**
betw

- https://eduassistpro.github.i
- **ation**.

Can lead to reduced **performance**.

- Add WeChat edu_assist_pr

Can also lead to **deadlock** *[Lectures 7, 9]*.

- When one or more processing units wait for a synchronisation
  even that never occurs.

Overview
Parallel concepts common to all architectures
Parallel concepts common to some architectures
Final Assessment

Weak and strong scaling, and models
Loop parallelismand data dependencies
Synchronisation
Load balancing and task parallelism
Data reorganisation

Load balancing and task parallelism
Lectures 13 and 19

Assignment Project Exam Help

Idle time is an example of poor **load balancing** *[Lecture 13]*.

-
- https://eduassistpro.github.i

Can improve load balancing by using a

Add WeChat edu_assist_pr

independent **tasks** are sent to processing uni
become idle.

- This is an example of **dynamic** scheduling; can also be **static**.

Overview
Parallel concepts common to all architectures
Parallel concepts common to some architectures
Final Assessment

Weak and strong scaling, and models
Loop parallelismand data dependencies
Synchronisation
Load balancing and task parallelism
Data reorganisation

Parallelising by **tasks** rather than loops is known as **task parallelism** [Lecture 19].

-

In gen

- Can represent as a **task graph**, wit   ks and **directed edges** denoted the dep
- For tasks that take the same time, can define t   he total number of tasks, and the **span** as the length of the critical path.

Overview
Parallel concepts common to all architectures
Parallel concepts common to some architectures
Final Assessment

Weak and strong scaling, and models
Loop parallelismand data dependencies
Synchronisation
Load balancing and task parallelism
Data reorganisation

Data reorganisation
Lecture 10

Parallel data reorganisation can be indexed by **read** locations
('gat

In sha

example of a **data race** (see later).

In distributed memory systems, can exploit
communication methods that are usual

- One-to-many, many-to-one (also many-to-many).
- *e.g.* broadcasting, scattering and gathering.

Overview
Parallel concepts common to all architectures
Parallel concepts common to some architectures
Final Assessment

Parallel hardware
Data races / race conditions
Explicit communication
Latency hiding

Parallel hardware
Lectures 2, 8, 14, 16

Modern HPC clusters are increasingly using all three architectures:

- re

- https://eduassistpro.github.i

Most multi-core CPUs usually have **m**
cache coherency and **false sharing** [edu_assist_pr

Network connectivity affects communi
hypercube often used [Lecture 8].

GPU's most suited for **data parallel problems** and have multiple
types of **memory** [Lectures 14, 16].

Overview
Parallel concepts common to all architectures
Parallel concepts common to some architectures
Final Assessment

Parallel hardware
Data races / race conditions
Explicit communication
Latency hiding

Data races / race conditions
Lectures 5, 6, 18

Assignment Project Exam Help

A **data race** potentially arises when two or more processing units read t   .

- https://eduassistpro.github.i
-

Can control using **critical regions** Add WeChat edu_assist_pr

- Exclusive access by a single processing unit
- Simple critical regions can be implemented more efficiently (*i.e.* by compiler and hardware) as **atomics**.

Overview
Parallel concepts common to all architectures
Parallel concepts common to some architectures
Final Assessment

Parallel hardware
Data races / race conditions
Explicit communication
Latency hiding

Lower level control
Lectures 7, 18

Assignment Project Exam Help

At a lo

mut

- https://eduassistpro.github.i

- Improper use of multiple locks can result in **deadlock**.

Add WeChat edu_assist_pr

At an even lower level, locks can be implemented usi

exchange and **atomic compare-and-exchange** *[Lecture 18]*.

- **Lock-free data structures** are desirable whenever possible.

Overview
Parallel concepts common to all architectures
Parallel concepts common to some architectures
Final Assessment

Parallel hardware
Data races / race conditions
Explicit communication
Latency hiding

Explicit communication
Lectures 9, 10, 12, 15, 19

Assignment Project Exam Help

If memory is distributed (in some sense), may need to use **explicit com**

https://eduassistpro.github.i

- Between CPU and GPU, *i.e.* **host**

Add WeChat edu_assist_pr

Communication can be:

- **Blocking**: Returns once all resources safe to re-use.
- **Synchronous**: Does not complete until sender and receiver start their communication operations.

Overview
Parallel concepts common to all architectures
Parallel concepts common to some architectures
Final Assessment

Parallel hardware
Data races / race conditions
Explicit communication
Latency hiding

Latency hiding
Lectures 12, 19

Can improve performance by **overlapping** communication with com

-
-

Often used with **domain partitioning** [Lecture 12].

Can also overlap host-device communication w a GPU [Lecture 19].

- Can also perform calculations on host and device simultaneously.

Add WeChat edu_assist_pr

I will now say a few words about the final assessme
this module...

Overview
Parallel concepts common to all architectures
Parallel concepts common to some architectures
Final Assessment

Final Assessment

The final assessment

This will be an online exam to be taken at 1000 (China time) on Tuesday 17th May 2022...

-
    -
    -
    on 17th May (unless you have been grante

- It is an "open book" exam but you will receive no c copying material directly from your lectur

- Your overall module grade will be the sum of your scores on the 3 courseworks and your score (out of 50) on this final assessment
    - Hence the final assessment is worth 50% of the total marks

Overview
Parallel concepts common to all architectures
Parallel concepts common to some architectures
Final Assessment

Final Assessment

The final assessment (continued)

- The paper will consist of two questions worth 25 marks each
  -

-

  - The 2020 and 2021 papers were both "open book" but the students were given more time to comple
    questions are longer than they will be this y
  - The 2018 and 2019 papers were both 2 hour
    they were "closed book" – so some section
    questions

- See the announcement on Minerva for some further advice
